IUPUI Alumni Survey -- University-Wide Questions

2000

IUPUI continually evaluates the quality of the college experience for students and the effect of the university experience on its graduates. In this survey we seek information on four major areas; your current employment, your prospects for further education, IUPUI's impact on your learning, and your satisfaction with your experiences at IUPUI. We appreciate your willingness to respond to these questions. Your answers are completely confidential and will be used only for program assessment purposes.

DO NOT PLACE YOUR NAME ON THIS SURVEY

ALL ANSWERS ARE GUARANTEED TO BE CONFIDENTIAL--ALL IDENTIFYING MARKS ARE REMOVED IMMEDIATELY AFTER YOUR COMPLETED SURVEY HAS BEEN RETURNED. NAMES ARE NEVER CONNECTED TO ANSWERS.

If you have any questions, do not hesitate to call the Office of Information Management and Institutional Research at 278-2282.

Please use the enclosed postage paid return address envelope to return the questionnaire to us. The survey will be delivered to:

Information Management and Institutional Research

Union Building, Room G003

IUPUI

Thank you in advance for your participation.

^aResponses provided on a 5-point scale, where 1=Low Ability Level, 3=Medium Ability and 5=High Ability. Reported values are averages.

^bResponses provided on a 5-point scale, where 1=Low Importance to Goals, 3=Medium Importance and 5=High Importance

Note: Differences in **bold** mean values are statistically significant at $p < .05$ as indicated by the non-overlap of bars in the adjacent chart.

See text box at the beginning of the report for further discussion of this significance criteria compared to the traditional t-test.

Alumni Profile

Several charts on the following pages display "floating bars" that represent a 95% confidence interval for the population mean based on the sample of survey respondents. Specifically, the starting point of the bar represents the sample mean minus approximately 2 standard error units and the length of the bar represents approximately 4 standard error units (see technical note below for further details).

The floating bars give you a sense of how reliably the sample mean can be generalized to the population that these data are supposed to represent; that is, undergraduate degree recipients graduating during the 1998-99 academic year. The width of the bar generally increases if the sample size decreases or the variation in answers to the item increases. More narrow bars would then occur for items with a larger number of respondents or smaller variation among responses.

The floating bars are particularly useful in comparing differences across items. If the bars overlap, then the apparent differences in means are not statistically significant. If the bars do not overlap, then the difference is statistically significant at the $p < .05$ level. The reader should note that this is a somewhat conservative test of statistical significance, as explained further in the following technical note.

Technical Note

The mean confidence interval uses the t-value associated with a probability level of 0.05 and the degrees of freedom appropriate to each item (i.e., $n - 1$). For example, for an item with 1000 respondents ($df = 999$), the corresponding t-value is 1.9623. The mean minus the standard error (standard deviation divided by the square root of the number of respondents) is the starting point for the bar, and $2 \times 1.9623 \times$ the standard error is the width of the bar.

Since the item confidence intervals are based on item standard errors, using the non-overlap of bars as an indication of a statistically significant difference is more conservative than a t-test between the two items. This is because the corresponding t-test would employ a pooled estimate of the standard error which would generally be lower than the individual item standard errors. The conservativeness of this test is more than offset by the large number of items that one can compare across this survey. Therefore, readers should still interpret these differences conservatively.

Highlights of the Alumni Survey for 1998-99 Undergraduate Degree

Recipients

[Highlights](#)

[Research Brief](#)

[Survey Instrument](#)

[IUPUI Campus Results](#)

Highlights

[Current Employment.](#) As in previous years, the vast majority of recent alumni are employed (91%), with only five percent not seeking work, and less than one percent in the military. Two percent are unemployed. Four out of ten continue to work for employers they worked for prior to graduating. Among those with new jobs, seven in ten attained jobs that require a college degree. Eighty-two percent of recent alumni say their job is related to their major and ninety-five percent say their IUPUI education enhanced their future prospects. The overall median salary for 1998-99 undergraduate degree recipients is \$30,000 - \$35,000.

[Further Education.](#) Eight in ten recent alumni are either currently enrolled at some institution of higher education or intend to further their education: one-fourth are currently enrolled and nearly sixty percent are planning to enroll at some institution of higher education in the future. Over half (57%) of those currently furthering their education are doing so at IUPUI. Considering all alumni who received their undergraduate degree during the 1998-99 academic year, one in ten is currently enrolled at IUPUI and another one-half say it is likely they will further their education here. In all, seven of ten recent alumni either are currently attending or say they plan to further their education at IUPUI.

[Satisfaction with IUPUI Experience.](#) Satisfaction results this year also mirror those of past years. Alumni indicate that they are most satisfied with aspects of their experience at IUPUI that they also consider to be most important. The quality of education received at IUPUI and the quality of teaching by faculty in their major area continue to rank highest in terms of both importance and satisfaction, followed by courses in the major. Recent alumni are least satisfied with their opportunities to work on faculty research projects, engage in extra-curricular activities, and engage in community service, each of which also ranks comparatively low in terms of importance. As in past years, academic advising remains an important concern for most alumni, but ranks relatively low in terms of satisfaction.

Changes From Previous Year ([Link to last year's report](#))

[Satisfaction and Importance.](#) There were only three statistically significant changes among all the satisfaction and importance items. Although very modest in size, the changes were all in a positive direction. This year's recent alumni were more satisfied with the helpfulness of IUPUI staff in general. The mean for this item increased from .74 to .85 on a scale ranging from -2 = strongly disagree, -1 = disagree, 0 = neutral, +1 = agree to +2 = strongly agree. In addition, recent graduates this year assigned greater importance to required courses outside the major and most importantly were more satisfied with these courses than graduates last year. The average rating for importance of required courses outside the major went from .77 to .89 and the average rating for satisfaction increased from .61 to .74. Although it is too early to attribute any cause to these changes, graduates may become more accepting of required courses as the *Principles of Undergraduate Learning* (PUL) are more integral to the curriculum. We will note whether this becomes a trend in future years.
